

slide-deck-composer

A clone-and-inject engine for real .pptx decks, hardened one real bug at a time

What changed after the first ship

70K years ago	Mercury is a small planet
600K years ago	Earth is the planet with life
2M years ago	Jupiter is a huge gas giant

Grouped shapes: text and pictures nested inside a group are now real, scorable candidates, not invisible
A custom layout: any real template shape becomes usable, not just the 6 named ones
Per-shape font resolution: checks a shape's real font, not just the theme's declared one
Real ECMA-376 schema validation: 24 real XSD files, not 7 self-authored guesses

Four rounds, each earning the next

	Success	Failed
Group A	75	30
Group B	60	40
Group C	100	50
Group D	90	40
Group E	150	60

Four hardening rounds, one real deck compiled and rendered each time

v0.1-0.3: clone-and-inject engine, 6 layouts, Vietnamese font-safety, font-size balancing

01

v0.4: real OOXML group support -- text and pictures nested in a group finally became visible

02

v0.5: a cold agent's real client brief found 2 real bugs no self-test had caught

03

v0.6-0.7: per-shape font resolution, then real ECMA-376 schema validation

Every number here is real

Layout types available

7

+1 custom

Real bugs found and fixed

13

3 rounds

Schema checks passed

24/24

0 false positives

Templates in the test corpus

149

real files

- Grouped shapes were invisible to this engine until v0.4 -- real templates hide content in them
- A cold agent chose the custom layout for 5 of 9 slides on its first real client brief
- Font safety used to check only the theme -- a real template's font hid one layer deeper
- Every fix here was verified by rendering the output, not by trusting a clean report

Two things this build got right

One working, audited skill beats ten unused ones in the registry

	Our company	Competitor
Product service	Eco-friendly	Smart features
Market share	25% regionally	40% nationally
Growth	18% growth	12% growth
Target	Homeowners	Tech-savvy
Marketing	Digital campaigns	TV ads
CSAT	High satisfaction	High satisfaction
Strengths	Brand loyalty	Established brand
Weakness	Limited product	Higher pricing

What's next

Layout coverage for stat callouts and icon grids -- now that custom has proven exactly where the real demand is
